Catalogue of the the artifacts found at Pernil Alto

Given are the Artifacts found at Pernil Alto sorted by the Artifact number. The informations include the feature from which the Artifact was derived, the class, the determination, the category, the subdivision, the material and the metric values of length (L), width (W), thickness (Th) (all in mm) and the weight (in g). For some Artifacts not all metric values were given, when – as for instance in the case of badly preserved textile remains – some of the metric values were senseless.

Furthermore the completeness for Artifacts which were incomplete – when they were preserved for less than 100 % but more than presumable 50 % – or fragments – when they were preserved for less than presumeably 50 % – is indicated for such Artifacts in parantheses in the line below the subdivision.

Some Artifacts were not clearly part of a category or subdivision. If that was the case, the regarding assignment was marked with the notion “potentially” in parantheses.

In the finer subdivisions as for instance in the various handstone subclasses, those were as well given in parathe-

ses after the assignment to the subdivision. For instance a “medium handstone” would be listed as “handstone (medium)”.

If the Artifacts had secondary or even tertiary functions, those were written into the same line as the first function but seperated with a hyphen. For instance a “medium handstone with a secondary function as a percussor” would be listed as “handstone (medium)-percussor”.

For some Artifacts special informations are given. This is especially the case for Artifacts of the classes of basketry and wood. For most of them a function was indicated after the assignment to a subdivision. As in the assignment for the categories and subdivisions, the less secure assignments of functions are marked with the notion “potentially” in parantheses. Furthermore the numbers, string sizes and directions of warps, wefts and other strings were indicated for basketry remains, if the Artifact was composed of such. For wristlets and necklaces the number of the different beads are indicated.
